BEL LIGHTING

Terms & conditions

Catalogue edition 02/2013

The data in this catalogue are provided in good faith and only for your information. This data may not be used against BEL Lighting. BEL LIGHTING reserves all rights to alter all product price and data any time, without any notice. The general BEL LIGHTING conditions of sale are always applicable. Nothing in this catalog may be reproduced without permission in writing from the BEL LIGHTING company.

Bel Lighting offers you the possibility to extend the initial legal guarantee of 2 years from most of our lights in adding 3 more years. You should get, in total, 5 years guarantee ! Most of our lights have also 15 years guarantee against perforation.

To have access to the service, fill in the document online or send us back the card that you will find included in the product's packing in the 3 months after your purchase.

More informations on www.bel-lighting.com/en/extended-warranty/email.html

RELUX[®]
international member

We provide you a photometric database of our products for use in RELUX. With this, you can simulate the rendering of our lights in your projects before they are ordered, thus ensuring you made the right choice.

Lighting Fair in Frankfurt (Germany)

NL

Gesticht in 1991, is BEL LIGHTING tot op heden een zelfstandig familiebedrijf met meer dan 50 personeelsleden, werkzaam in onze productie te Megara (Griekenland op 20min van Athenes) en onze hoofdzetel te Sint-Renelde (België nabij Brussel). Als ontwikkelaar in de verlichtingssector gespecialiseerd in buitenverlichting, ontwikkelen en produceren wij toestellen van hoogwaardige kwaliteit voor een internationaal cliënteel. Creatie en design worden intern ontwikkeld, wat met de jaren resulteert naar een uitgebreid gamma. Het continue nastreven naar hoogwaardige kwaliteit is de sleutel van ons succes. Onze visie omtrent kwaliteit houdt ook in dat niet alleen de kwaliteit van het product perfect hoeft te zijn, en dus ook professionaliteit op niveau van advies, een betrouwbare en klantvriendelijke service en een goede follow-up van afgesproken leveringstermijnen zijn hier onontbeerlijk.

De prioritaire activiteiten van BEL LIGHTING zijn het permanent aanpassen van onze producten te behoeve van de klant en ten behoeve van huidige vernieuwde technieken en trends, wat bijdraagt tot de betrouwbaarheid van onze producten. Onze creaties beantwoorden aan de huidige kwalitatieve normen en kiezen dus nauwkeurig eerste keuze grondstoffen uit. Een uitgebreid gamma wordt vervaardigd met natuurlijke zoals aluminium, messing, inox, exotisch hardhout en Belgische blauwe steen, die zich integreren in hun natuurlijke omgeving. De technische kwaliteit en een mooi design zijn de belangrijkste objectieven van ons bedrijf, doch een conform gebruik en plaatsing door een erkend installateur u een langdurig en veilig gebruik. Deze editie van onze catalogoog is meer dan een update van onze complete collectie van verlichtingstoestellen. Deze catalogoog is het resultaat van teamwork op niveau van research, design, technische input, productie en marketing.

BEL LIGHTING, de waarde toegevoegd aan het licht.

FR

Fondée en 1991, BEL LIGHTING reste à ce jour une société familiale, indépendante, avec plus d'une cinquantaine d'employés travaillant dans notre usine de Megara (Grèce) et au siège central de Saintes (Belgique). Créateur de luminaires spécialisé dans l'éclairage extérieur, nous développons et produisons des appareils de haute qualité pour une clientèle internationale. La création et le design étant effectués en interne, nous avons fermement décidé de bâtir notre réputation dans le haut de gamme. L'insistance sur une haute qualité est la clef de notre succès et est, à nos yeux, plus que le simple approvisionnement d'un produit parfait. Elle englobe également la compétence professionnelle, le conseil, un service amical, fiable et rapide ainsi que le respect de la date de livraison promise.

La préoccupation principale de la firme est l'adaptation permanente des produits aux besoins spécifiques du marché, créant ainsi une atmosphère de confiance avec nos clients. Nos créations répondent aux normes de qualité et nous employons toujours des matières premières nobles. Certains produits sont fabriqués dans des matières naturelles (aluminium, laiton, inox, bois exotique et pierre Belge) sans protection de surface et qui s'intègrent totalement dans leur environnement naturel. La qualité technique et un bon design sont les objectifs essentiels de notre travail dans le développement et la fabrication de nos produits, mais seule une utilisation conforme, une installation et un entretien fait par un spécialiste garantit la sécurité d'exploitation. Cette édition de notre catalogue est, plus qu'une mise à jour de la gamme complète de nos luminaires, c'est le résultat du travail de nos équipes de recherche, design, contribution technique, production et marketing.

BEL LIGHTING, la valeur ajoutée à la lumière.

Factory in Greece

Headquarters in Belgium

EN

Founded in 1991, BEL LIGHTING is still to this day an independent family company with over a fifty employees working here at our present factory in Megara (Greece) and headquarters in Saintes (Belgium). Lighting creator specialized in outdoor lighting, we develop and produce high-quality products for an international clientele. We do our own in-depth design work and have steadily built up our range over a number of years. Insistence on high quality has been a foundation of our success. Quality, in our view, means more than the simple supply of a flawless product, it stands also for professional competence in giving advice, a fast, reliable and friendly service for our customers, and adherence to promised delivery dates.

The main preoccupation of the firm is the permanent adaptation of its products to the specific needs of the market and the client, creating this way a complete confidence atmosphere. Our creations reply to the norms of quality and we always use first choice materials. Some products are manufactured in natural materials (aluminium , brass, stainless steel, exotic wood and Belgian stone) without coating and integrate totally their natural environment. The technical quality and a good design are the essential objectives of our work in the development and the manufacture of our products, but only a conform utilisation, a setting and maintains made by specialists guarantee the security of exploitation. This edition of our catalogue is more than just an update of the complete range of lighting products. It is the result of our engagement with quality and a teamwork in the improvement of research, design, technical input, manufacturing and marketing.

BEL LIGHTING, the value added to the light

GR

Η εταιρεία BEL LIGHTING ιδρύθηκε το 1991 και μέχρι και σήμερα αποτελεί μια ανεξάρτητη οικογενειακή επιχείρηση με περισσότερους από πενήντα εργαζόμενους στο εργοστάσιό μας στα Μέγαρα και το κέντρο διανομής μας στο Saintes στο Βέλγιο. Οι σχεδιαστές μας εξειδικεύονται στον σχεδιασμό φωτιστικών εξωτερικού χώρου. Δημιουργούμε και παράγουμε υψηλής ποιότητας προϊόντα για διεθνή πελατεία και δουλεύοντας σε βάθος χρόνου έχουμε χτίσει τη γκάμα των φωτιστικών μας, που μας εδραιώνει στον χώρο. Η υψηλή ποιότητα είναι εκείνη, που μας ξεχωρίζει. Όπως και η άμεση και φιλική εξυπηρέτηση, η δυνατότητά μας να παρέχουμε συμβουλές για τον φωτισμό χώρων και η πάντα γρήγορη παράδοση.

Οι δημιουργίες μας ανταποκρίνονται στις ποιοτικές νόρμες της E.E και φροντίζουμε πάντα να επιλέγουμε βέλτιστης ποιότητας υλικά. Κάποια από τα προϊόντα μας είναι φτιαγμένα από φυσικά υλικά (μπρούτζο, φυσικό αλουμίνιο, ανοξείδωτο ατσάλι) χωρίς οποιαδήποτε επιπλέον επικάλυψη και απολύτως εναρμονισμένα με το φυσικό περιβάλλον. Η κατασκευαστικά άριστη ποιότητα και το design κάνουν τους εξειδικευμένους συνεργάτες μας να εγγυούνται για ολόκληρη τη γκάμα των φωτιστικών μας.

BEL LIGHTING, the value added to the light

DE

Seit der Gründung im Jahr 1991 ist unser Unternehmen Bel Lighting ein unabhängiger Familienbetrieb der mittlerweile mehr als fünfzig Angestellte in den beiden Produktionszentren Megara (Griechenland) und Saintes (Belgien) beschäftigt. Als Leuchtenmanufaktur mit dem Schwerpunkt im Außenleuchtensegment entwickeln und produzieren wir hochwertige Produkte für unsere internationale Kundschaft. Wir investieren kontinuierlich in das Design neuer Leuchtenkreationen und konnten dank dieser Investition unsere Produktpalette stetig ausbauen. Der Anspruch an höchster Qualität ist das Fundament unseres Erfolgs. Qualität bedeutet aus unserer Sicht nicht nur einfach der Vertrieb von makellosen Produkten, sondern auch professionelle Beratung, sowie schnellst möglichen, zuverlässigen und freundlichen Service für unsere Kunden und Einhaltung von zugesagten Lieferzeiten.

Das Hauptaugenmerk unseres Unternehmens liegt in der permanenten Anpassung der Produkte an die spezifischen Wünsche des Marktes und der Kunden. Auf diesem Wege wird eine vertrauensvolle Atmosphäre geschaffen. Wir verwenden stets erste Wahl Materialien, wodurch unsere Leuchtenkreationen stets höchste Qualitätsmaßstäbe erfüllen. Einige Produkte werden aus natürlichen Materialien gefertigt (Aluminium, Bronze, Nichtrostender Stahl, exotisches Holz und Belgischer Blaustein) und ohne zusätzliche Schutzschichten in ihrer Natürlichkeit erhalten, wodurch sie sich hervorragend in ihrer natürlichen Umgebung integrieren. Die technische Ausgereiftheit und ein herausragendes Design sind essentielle Triebfedern unserer Arbeit in der Entwicklung und Fertigung. Jedoch bedarf es für eine optimale und sichere Anwendbarkeit unserer Produkte auch eine sachgerechte Verwendung, sowie eine vom Fachmann sichergestellte Installation und Wartung. Diese Ausgabe unseres Katalogs ist mehr als nur ein update unserer Beleuchtungsserie. Es ist vielmehr ein Ergebnis unseres Engagements durch Qualität und Teamwork eine Optimierung unserer Forschung, unseres Designs, der technischen Performance, der Fertigung und des Vertriebs zu erreichen.

BEL LIGHTING, unser Maßstab ist das Licht.

Saturn Hight Power Led

- Coverplate 4mm in anodised aluminium
- Safety clear glass 10mm thickness
- Body made of anodised aluminium
- Screws in stainless steel
- Degree of protection IP68
- Power Led 500mA or 700mA incorporated

CLASS I - CLASSE I - SCHUTZKLASSE I

- Light fixture whose safety is guaranteed by the main insulation and an additional protective conductor (earth contact) connected with the metal frame of the lamp. Earth contact is obligatory.
- Deze armaturen zijn uitgerust met aansluitmogelijkheid voor aarding, waarmee alle aanraakbare metalen delen die bij een isolatiestoring direct onder spanning kunnen komen, moeten verbonden zijn. Aansluiting aan de aardleiding is verplicht.
- Les luminaires sont équipés d'un moyen de raccordement pour la mise à la terre, qui interconnecte toutes les parties métalliques exposées susceptible d'être mise sous tension suite à un défaut de l'isolation. Le raccordement de mise à la terre est obligatoire. En cas de défectuosité, le courant est coupé par fusible.
- Die Leuchten sind mit Verkabelungen für den Erdanschluß ausgestattet, die alle ausgelegten metallischen Bestandteile miteinander vernetzen, welche im Falle einer Isolationspanne mit Strom versorgt werden können. Die Erdanschlußverkabelungen sind obligatorisch. Im Falle eines Defektes, wird der Strom durch eine Sicherung abgestellt.
- Ένα φωτιστικό, του οποίου η ασφάλεια είναι εγγυημένη από ένα πρόσθετο προστατευτικό αγωγό (γείωση), που συνδέεται με το μεταλλικό πλαίσιο του λαμπτήρα.

CLASS II - CLASSE II - SCHUTZKLASSE II

- Light fixture whose safety is guaranteed by the main insulation and additional safety devices as double or reinforced insulation of conductive parts. Earth contact is not necessary.
- Deze armaturen hebben een beschermende isolatie zonder metaaldelen die genaakbaar zijn. Dubbele isolatie zonder aarding.
- Les luminaires possèdent une isolation renforcée sans parties métalliques accessibles. Double isolation sans mise à la terre.
- Die Leuchten besitzen eine verstärkte Isolierung ohne metallische Bestandteile. Doppelte Isolierung ohne Erdanschluß.
- Ένα φωτιστικό, του οποίου η ασφάλεια είναι εγγυημένη από ένα πρόσθετο προστατευτικό αγωγό (γείωση), που συνδέεται με το μεταλλικό πλαίσιο του λαμπτήρα.

CLASS III - CLASSE III - SCHUTZKLASSE III

- Light fittings whose safety is guaranteed by the very low safety supply voltage. Authorized maximal voltage: 50 volts (AC)
- Deze armaturen waarin de bescherming tegen elektrische schokken beschermt word door zijn lage spanning (SELV) (Maximale spanning 50volt (AC).
- Luminaire dont la protection contre les chocs électriques repose sur son alimentation sous très basse tension de sécurité (TBTS) (tension maximale autorisée : 50 Volts (courant alternatif)).
- Leuchten deren Schutz vor Stromschlägen auf eine sehr niedrige, abgesicherte Stromspannung beruht. (Max. erlaubte Spannung: 50 Volts Wechselstrom). Ένα φωτιστικό, του οποίου η ασφάλεια είναι εγγυημένη από ένα πρόσθετο προστατευτικό αγωγό (γείωση), που συνδέεται με το μεταλλικό πλαίσιο του λαμπτήρα.

CE standard - CE norm - norme CE

- The mark CE represents an implicit assurance of quality and affixed under the sole responsibility of the manufacturer. The mark CE must be affixed on the product, or in alternative, on the packing or on directions.
- De CE markering waarborgt een stilzwijgende kwaliteitsgarantie en wordt aangebracht onder uitdrukkelijke verantwoordelijkheid van de fabrikant. De CE markering wordt aangebracht op het toestel of als alternatief op de verpakking of de gebruiksaanwijzing.
- La marque CE représente une implicite assurance de qualité et est apposée sous la responsabilité exclusive du fabriquant. La marque CE doit être apposée sur l'appareil, ou en alternative, sur l'emballage ou sur les modes d'emploi.
- Das CE-Zeichen verkörpert eine klare Sicherung der Qualität und wird auf ausschliessliche Verantwortung des Herstellers angebracht. Das CE-Zeichen muss auf dem Produkt, auf der Verpackung oder auf der Gebrauchsanweisung angebracht werden.
- Η σήμανση CE αποτελεί μια έμμεση διασφάλιση της ποιότητας και τίθεται υπό την αποκλειστική ευθύνη του κατασκευαστή.

Grondstoffen

Inox 304L en 316L

Inox is een uniek materiaal met een uitzonderlijke weerstand en makkelijk recycleerbaar. Zijn functionaliteit en zijn roestvrij staal is een uniek materiaal met een uitzonderlijke weerstand en eenvoudig te recycleren. De functionele waarden maakt het mogelijk om te worden gebruikt, niet alleen voor grote industriële projecten en prestigieuze, maar ook voor iedere tak van industrie (auto industrie, voeding, ...). Roestvrij staal kan ongewijzigd blijven tientallen jaren voordat zij behandeld dient te worden. Bovendien door zijn extreme weerstand voldoet hij aan alle mechanische en thermische sterkte. RVS zelfbescherming door te reageren op atmosferische zuurstof en het creëren van een beschermende membraan. De 304L inox kan vlekken oxidatie (iconische) vertonen die verdwijnt na reiniging. Het nikkel gehalte en chroom gehalte verhoogt de weerstand tegen corrosie. Let op roestvrij staal die is behandeld door instrumenten zoals draaibanken, CNC, enz.. wordt als gevolg van elektrische ladingen die zich ontwikkelde tijdens de behandeling als gevolg van wrijving gemagnetiseerd. Visueel, is inox een van de mooiste materialen, bekend om de duurzaamheid van zijn ontwerpen, hij word gerespecteerd door architecten en interieur ontwerpers. Gemakkelijk te combineren, is dit een uitzonderlijk materiaal.

Elektrolytisch polijsten (oppervlaktebehandeling van roestvast staal)

Verhoogde corrosiebestendigheid: voor de chemische en farmaceutische industrie, voor buiten- en architecturale toepassingen, voor boten en jachten, voor zwembaden en andere situaties van put- en spleetcorrosie.

Aarzel niet ons een persoonlijke prijsofferte te vragen.

Deze behandeling is mogelijk op het grootste deel van ons gamma armaturen in inox 304L en 316L.

Aluminium (serie 6000)

Aluminium legering van silicium en magnesium, gebruiken we vooral voor onze productie profielen van verschillende diktes van de 6000-serie. Het heeft een zeer goede decoratieve gedrag, maar ook een uitzonderlijke weerstand tegen atmosferische erosie.

Wij voeren de volgende uitvoeringen :

- geborsteld aluminium 
- geanodiseerd aluminium 
- gelakt aluminium 

Behandeling van het aluminium

- **Anodiseren** : de transformatie van het aluminium oppervlak en het creëren van een kunstmatig laag oxide. De procedure gebeurt onder gecontroleerde omstandigheden en absoluut goed, deze oxidelaag is zeer consistent en hard om het aluminium te beschermen.
- **Elektrostatische gelakt** : het is een laag polyesterverf . het behandelen van het metaal met een speciale laag (Brighmer), om het nog beter bestand tegen erosie te maken.

Koper

Samen met goud, is koper het enige metaal dat van nature is gekleurd. Het natuurlijke aspect van dit metaal is rood, een kleur die hem een metaalglans geeft. Het heeft een thermische en elektrische geleidbaarheid en uitstekende weerstand tegen erosie door water, het maritieme milieu en organische zuren. Het heeft geen magnetische eigenschappen. Het koper beschermt zichzelf door het ontwikkelen van een natuurlijke laag van bruin-groen kleur bij blootstelling aan de externe omgeving.

Messing

Dit is een legering van koper en zink. Harder metaal dan koper, heeft een natuurlijke geelachtige kleur. Messing creëert een natuurlijke laag van bruin-zwart op zijn oppervlak, dit zorgt voor zelfbescherming tegen corrosie bij blootstelling aan de externe omgeving.

Wij voeren de volgende uitvoeringen :

- messing gepolijst 
- geborsteld messing 
- bronzen afwerking 

Belgische blauwe steen

Van Belgische oorsprong, is gebruikt sinds meer dan 300 jaar in gebouwen doorheen de Belgische geschiedenis. Dit is waarom de ontwerpers van Bel-Lighting dit hebben geïntroduceerd in hun productie.

De blauwe steen is een onvervangbaar materiaal van uitzonderlijke kwaliteit en, net als hout, stijgt de waarde in de tijd: de erosie zal blijven verfraaien.

Onze armaturen zijn met het label «echt Belgisch Blauwe Hardsteen uit Henegouwen» met de goedkeuring en technische certificaat verleend door het U.B.A.t.c.

Iroko

De exotische hout «Iroko» komt uit Zuid-Afrika. Het type hout dat wordt gebruikt voor de scheepsbouw, tuinmeubilair, ... Zijn duurzaamheid is meer dan 25 jaar (Wood klasse I).

Het onderhoud wordt een keer per jaar gedaan met :

- een olie voor Iroko of Tek
- een beschermende houtvernis voor buitengebruik

Voor aflevering maken we gebruik van een specifieke olie om het hout te behandelen. Het hout is van uitstekende kwaliteit en betrouwbare weerstand.

Matières premières

Inox 304L ou 316L

L'acier inoxydable est un matériau unique d'une résistance exceptionnelle et facilement recyclable. Ses valeurs fonctionnelles et sa valeur monétaire lui permette d'être utilisé non seulement pour des projets industriels majeurs et prestigieux, mais également pour toute forme d'industrie (automobile, alimentaire, ...). L'inox peut rester inchangé des décennies avant de devoir subir un quelconque traitement. En plus de son extrême résistance à la corrosion, il répond aux exigences de toutes les résistances mécaniques et thermiques. L'inox s'auto protège en réagissant à l'oxygène atmosphérique en créant une membrane résistante de protection. Le 304L inoxydable peut présenter des taches d'oxydation qui disparaissent grâce au nettoyage. Sa teneur en nickel et chrome principalement augmente sa résistance à la corrosion. Attention, l'inox qui a subi un traitement par des instruments comme tours, CNC, etc. se magnétise en raison des charges électriques qui se sont développées pendant le traitement en raison du frottement. Visuellement, l'inox est l'un des plus beaux matériaux, connu pour la durabilité de ses designs, il l'emporte haut la main chez les architectes et les décorateurs. Facilement combinable, c'est un matériau exceptionnel.

L'électropolissage sur l'inox

Ce procédé augmente la résistance à la corrosion, il est utilisé pour l'industrie chimique et pharmaceutique, pour des applications extérieures et d'architecture, des bateaux et yachts, pour piscines, pour les situations maritimes et d'autres applications faisant face à la corrosion par piqûres.

N'hésitez pas à demander une offre personnalisée, ce procédé est réalisable sur la plupart de nos luminaires en inox 304L ou 316L.

Aluminium (série 6000)

Alliage d'aluminium de silicium et de magnésium, nous utilisons principalement pour notre production des profilés de différentes épaisseurs de la série 6000. Il présente une très bonne conduite décorative, mais aussi une résistance exceptionnelle à l'érosion atmosphérique.

Nous effectuons les finitions suivantes :

- aluminium brossé
- aluminium anodisé
- aluminium peint

Traitements de l'aluminium

- **Anodisation** : c'est la transformation de la surface de l'aluminium et la création d'une couche artificielle d'oxyde. La procédure se fait sous des conditions absolument contrôlées et ainsi cette couche d'oxyde est très cohérente et dure pour protégé l'aluminium.
- **Peinture électrostatique** : c'est une couche polyesterique de peinture. Le stade antérieur est le recouvrement du métal avec une couche spéciale (Brighmer), afin qu'il soit encore plus résistant à l'érosion.

Cuivre

Avec l'or, le cuivre est le seul métal naturellement coloré. L'aspect naturel de ce métal a une couleur rouge ce qui lui donne un éclat métallique lorsque il brille. Il a une conductibilité thermique et électrique et une résistance excellente à l'érosion d'eau, l'environnement marin et aux acides organiques. Il ne présente pas d'attributs magnétiques. Le cuivre s'auto protège en développant une couche naturelle de couleur brune-verte lorsqu'il est exposé à l'environnement extérieur.

Laiton

C'est un alliage de cuivre et de zinc. Métal plus dur que le cuivre, il a un aspect naturel jaunâtre. Le laiton crée une couche naturelle de couleur brune-noire à sa surface pour s'auto protéger de la corrosion lorsqu'il est exposé à l'environnement extérieur.

Nous effectuons les finitions suivantes :

- laiton poli
- laiton brossé
- finition bronze

Pierre bleue belge

D'origine belge, elle est utilisée depuis plus de 300 ans dans les constructions au travers de l'histoire belge. C'est donc une partie de cette histoire que les designers de Bel-Lighting ont introduit dans leur production.

La pierre bleue constitue une matière irremplaçable d'une qualité exceptionnelle et qui, tout comme le bois, augmente en valeur avec le temps : l'érosion et la patine continuent à l'embellir.

Nos luminaires portent l'étiquette « véritable Pierre Bleue belge du Hainaut » avec l'approbation technique et le Certificat accordé par l'U.B.A.t.c.

Iroko

Le bois exotique « Iroko » provient du sud de l'Afrique. Le même type de bois est utilisé pour les constructions navales, hydrauliques, les meubles extérieurs,... Sa résistance est de plus de 25 ans (Wood class I).

Son entretien se fait une fois par an avec :

- une huile pour Iroko ou Tek
- un vernis de protection pour bois extérieur

Avant livraison, nous utilisons une huile spécifique pour traiter le bois. C'est un bois d'une qualité excellente et d'une résistance fiable.

Raw materials

Stainless steel 316 and 304L

Stainless steel is a unique material with exceptional resistance that can be easily recycled. Its values and its functional cash value allows it to be used not only for prestigious and major industrial projects, but also for any type of industry (automotive, food, ...). Stainless steel can remain unchanged for decades before having to undergo any treatment. In addition to its extreme resistance to corrosion, it also has thermal and mechanical resistance. Stainless steel is self protected by responding to atmospheric oxygen by creating a resistant protective membrane. The 304L stainless can cause oxidation stains (iconic) that disappear through cleaning. Its nickel content, mainly chromium, increases its resistance to corrosion. Beware stainless steel that has been treated by instruments as lathes, CNC, etc.. is magnetized due to electrical charges that develop during treatment because of friction.

Electropolishing of stainless steel

This process increases the corrosion resistance, it is used for the chemical and pharmaceutical industry, for external and architectural applications, boats and yachts, swimming pools, for marine situations and other applications facing to pitting corrosion. Feel free to request a personalized offer, this process is available on most of our lights in stainless steel 304L or 316L.

Aluminum (series 6000)

Alloys like Aluminum of silicon and magnesium, are used in principal for our production profiles of different thicknesses of the 6000 series. It has very good decorative conduct, but also an exceptional resistance to atmospheric erosion.

We perform the following finishes :

- brushed aluminum 
- anodized aluminum 
- painted aluminum 

Aluminum treatments

- **Anodization:** is the transformation of the surface of the aluminum and the creation of an artificial layer of oxide. The process is done under controlled conditions and so this oxide layer is very consistent and hard in order to protect the aluminum.
- **Electrostatic painting:** is a Polystyrene paint layer. The earlier stage is the recovery of metal with a special layer (Brighmer), to make it even more resistant to erosion.

Copper

Together with gold, copper is the only metal that is naturally colored. The natural aspect of this metal has a red color which gives it a metal look when it shines. It has a thermal and electrical conductivity and has excellent resistance to erosion of water, Marine environment and organic acids. It has no magnetic attributes. Copper is self protected by developing a layer of natural brown-green when exposed to the outside environment.

Brass

This is an alloy of copper and zinc. A harder metal than copper, it has a yellowish natural view. Brass creates a natural layer of brown-black on its surface for self protection from corrosion when exposed to the external environment.

We perform the following finishes :

- polished brass
- brushed brass
- bronze finish

Belgian stone

Of Belgian origin, it has been used for over 300 years in buildings throughout Belgian history. This is part of the story that the designers of Bel-Lighting have introduced into their production.

The blue stone is an irreplaceable material of exceptional quality, just like wood, it increases in value with time: erosion and patina continue to enhance & garnish.

Our range in stone are labeled «real Belgian Hainaut Blue Stone» with the approval and technical certificate delivered by U. B.A.t.c

Iroko

The exotic wood «Iroko» comes from South Africa. The same type of wood is used for ships building, hydraulics, outdoor furniture, ... It's strength lasts more than 25 years (Wood class I).

Maintenance is done once a year with:

- an oil for Iroko or Tek
- a protective varnish for exterior wood

Before delivery, we use a specific oil to treat the wood.
This wood is of excellent quality and reliable resistance.

Materialien

Inox 304L oder 316L

Der rostfreie Stahl ist ein einzigartiges Material mit einer außergewöhnlichen Widerstandskraft und einfachen Wiederverwertbarkeit. Die funktionellen Werte und der wirtschaftliche Wert des Inox Stahls eignen sich nicht nur für den Einsatz in wichtigen und prestigeträchtigen Industrieprojekten sondern auch für jegliche andere Industriezweige (Automobil, Lebensmittel....) Inox kann jahrzehntelang unverändert bleiben bevor er irgendeiner Verarbeitung unterzogen wird. Außer der extremen Widerstandsfähigkeit gegen Korrosion (Rosten), erfüllt er auch die Anforderungen aller mechanischen und thermischen Widerstandskräfte. Inox reagiert auf Sauerstoff indem er eine resistente Schutzmembran entwickelt. Der 304L rostfreie Stahl kann Oxidierungsflecken aufweisen, welche aber durch Reinigung entfernt werden können. Seine Nickel- und Chrombestandteile erhöhen grundsätzlich seine Korrosionsresistenz. Vorsicht, Inox der durch Instrumente wie Drehzahlmesser, CNC (computergestützte numerische Steuerung) etc. verarbeitet wird, magnetisiert durch elektrische Ladung, die im Laufe der Behandlung durch Reibung entsteht. Optisch betrachtet zählt Inox zu den schönsten Materialien, bekannt für sein haltbares Design hat er einen hohen Stellenwert bei Architekten und Dekorateuren. Da er leicht kombinierbar ist, gehört er zu den Ausnahmehmaterialien.

Inox-Stahl Elektropolierung

Dieses Verfahren erhöht die Korrosionsresistenz und wird in der chemischen- und pharmazeutischen Industrie eingesetzt, bei äußeren und architektonischen Anwendungen, Booten und Jachten, Schwimmbädern, im maritimen Bereich und anderen Anwendungen die von Lochfraß betroffen sind. Zögern Sie nicht ein individuelles Angebot anzufordern. Dieses Verfahren läßt sich mit der Mehrheit der Inox Leuchten 304L oder 316L durchführen.

Aluminium (Serie 6000)

Für die Legierung von Aluminium, Silicium und Magnesium nutzen wir hauptsächlich für unsere Produktion Profilstahl in unterschiedlichem Umfang der Serie 6000. Das Aluminium besitzt gute Leitungsfähigkeiten, allerdings auch eine außergewöhnliche Resistenz gegen Lufterosion.

Wir verarbeiten folgende Ausführungen :

- Aluminium poliert 
- anodisiert Aluminium 
- gestrichen Aluminium 

Aluminiumverarbeitung

- **Anodisierung:** die Umwandlung der Oberfläche und die Entstehung einer künstlichen Oxidschicht. Das Verfahren steht unter ständiger Kontrolle und führt somit zu einer Oxidschicht, die sehr beständig und fest ist und als Schutz dient.
- **Elektrostatische Farbe:** eine Polyester-Farbschicht. Im Vorstadium erhält das Metall eine Spezialbeschichtung um eine höhere Erosionsresistenz zu erlangen.

Kupfer

Gold und Kupfer sind die einzigen Metalle mit natürlichen Farben. Die natürliche Farbe des Kupfers geht ins Rötliche, was einen metallischen Schimmer hervorbringt wenn es glänzt. Das Kupfer hat eine thermische und elektrische Leitungsfähigkeit, besitzt eine exzellente Resistenz gegen Wassererosion, im maritimen Umfeld und gegen organische Säure. Es weist keine magnetischen Eigenschaften auf. Als Selbstschutz entwickelt das Kupfer eine natürliche Schicht in braun-grüner Farbe wenn es den äußeren Witterungen ausgesetzt ist.

Messing

Es handelt sich um die Legierung aus Kupfer und Zink. Das Messing ist härter als Kupfer und hat einen natürlichen gelblichen Farbton. Das Messing entwickelt eine natürliche braun-schwarze Farbschicht an der Oberfläche um sich vor der Korrosion zu schützen wenn es den äußeren Witterungen ausgesetzt ist.

Wir verarbeiten folgende Messingsorten :

- glänzend Messing 
- poliert Messing 
- aus Bronze 

Stein aus Belgien

Dieser Stein stammt aus Belgien und wird seit über 300 Jahren im Bauwesen der belgischen Geschichte eingesetzt. Es handelt sich also um ein Stück belgische Geschichte die die Designer von Bel-Lighting in ihre Produktion übernommen haben.

Der Blaustein besteht aus einer unersetzbaren Materie mit einer ganz besonderen Qualität und gewinnt, so wie das Holz, mit der Zeit an Wert: Die Erosion und die Patina tragen zur Verschönerung bei.

Unsere Leuchten tragen die Aufschrift „wahrer Blaustein aus Belgien-Hennegau“ mit der technischen Zulassung und dem vom U.B.A.t.c. (Belgischer Verband für technische Zulassungen im Bauwesen) ausgestellten Zertifikat.

Iroko

Das exotische Holz namens „Iroko“ stammt aus Südafrika. Die gleiche Holzart wird für den Schiffs- und Wasserbau, Außenaustattungen/Verkleidungen verwendet. Die Haltbarkeit reicht für mehr als 25 Jahre (Wood class I).

Die Behandlung erfolgt einmal im Jahr mit:

- einem Spezialöl für Iroko oder Tekholz
- einem Schutzlack für Außenholz

Vor Auslieferung behandeln wir das Holz mit einem spezifischen Öl.

Es handelt sich um exzellentes Qualitätsholz mit einer zuverlässigen Widerstandsfähigkeit.

ΠΡΩΤΕΣ ΥΛΕΣ

Ανοξειδωτος χάλυβας 316 - 304L

Ανθεκτικό χαμηλής συντήρησης υλικό εύκολα ανακυκλώσιμο. Αυτό-προστατεύεται αντιδρώντας με το ατμοσφαιρικό οξυγόνο και δημιουργεί μια ανθεκτική μεμβράνη προστασίας. Παρουσιάζει εξαιρετική αντοχή στην οξείδωση ακόμα και υπό τη παρουσία ισχυρών οξέων, αλκαλικών διαλυμάτων αλλά και σε περιβάλλον έντονης αλατονέφωσης. Το ανοξειδωτο 304L παρουσιάζει εικονικά στίγματα οξείδωσης, τα οποία φεύγουν με το καθάρισμα. Η περιεκτικότητά του σε νικέλιο και -κυρίως- σε χρώμιο αυξάνουν την ανθεκτικότητά του. Εάν το ανοξειδωτο μαγνητίζεται σημαίνει ότι έχει υψηλή περιεκτικότητα σε σίδηρο και, συνεπώς, δεν έχει σε μεγάλο βαθμό τις ιδιότητες του ανοξειδωτου. Προσοχή ανοξειδωτος χάλυβας, ο οποίος έχει υποστεί κάθετη επεξεργασία σε μηχανήματα όπως τόρνοι, CNC, μαγνητίζεται λόγω των ηλεκτρικών φορτίων που αναπτύσσονται κατά την επεξεργασία εξαιτίας της τριβής.

Ηλεκτρο-στίλβωση ανοξειδωτου ατσαλιού

Αυτή η διαδικασία αυξάνει την ανθεκτικότητα του υλικού στη διάβρωση. Χρησιμοποιείται κυρίως στη χημική και φαρμακευτική βιομηχανία, καθώς και σε εξωτερικές και αρχιτεκτονικές εφαρμογές, όπως σκάφη, yachts, πισίνες και γενικά σε υδάτινο περιβάλλον. Μη διστάσετε να επικοινωνήσετε μαζί μας, για να μάθετε περισσότερα και να δείτε σε ποια από τα προϊόντα μας μπορεί να πραγματοποιηθεί αυτή η ιδιαίτερη επεξεργασία.

Αλουμίνιο (σειρά 6000)

Είναι κράμα αλουμινίουipuritίου και μαγνησίου. Χρησιμοποιείται κυρίως στην παραγωγή προφίλ. Παρουσιάζει καλή διακοσμητική συμπεριφορά, αλλά και εξαιρετική αντοχή στην ατμοσφαιρική διάβρωση.

Εφαρμόζουμε τις παρακάτω επεξεργασίες :

- βουρτσαριστό αλουμίνιο
- ανοδεδίωμενο αλουμίνιο
- βαμμένο αλουμίνιο

Επεξεργασίες στο αλουμίνιο

- **Ανοδείωση** : Είναι ο μετασχηματισμός της επιφάνειας του αλουμινίου και η δημιουργία τεχνητού στρώματος οξειδίου. Η διαδικασία γίνεται κάτω από απόλυτα ελεγχόμενες συνθήκες κι έτσι το στρώμα αυτό του οξειδίου είναι πολύ ανθεκτικό και σκληρό.
- **Ηλεκτροστατική βαφή** : Με τη βαφή αυτή επικαλύπτεται η επιφάνεια του αλουμινίου με ένα στρώμα πολυεστερικής βαφής. Το προηγούμενο στάδιο είναι η επικάλυψη του μετάλλου με ένα ειδικό αστάρι (Brightner), ώστε να είναι ακόμη ανθεκτικότερο στη διάβρωση. διάβρωση.

Χαλκός

Η φυσική όψη του μετάλλου αυτού έχει ένα κόκκινο χρώμα, το οποίο αποκτά μεταλλική λάμψη όταν γυαλιστεί. Έχει θερμική και ηλεκτρική αγωγιμότητα, άριστη αντίσταση στη διάβρωση από νερό, στο θαλάσσιο περιβάλλον, τα αλατούχα διαλύματα και τα οργανικά οξέα. Δεν εμφανίζει μαγνητικές ιδιότητες. Ο χαλκός αυτοπροστατεύεται αναπτύσσοντας μια καφέ - πράσινη πατίνα, όταν εκτίθεται σε εξωτερικό περιβάλλον.

Ορείχαλκος

Κράμα χαλκού και ψευδαργύρου. Μέταλλο πολύ σκληρότερο του χαλκού. Η φυσική του όψη είναι κιτρινωπή. Ο ορείχαλκος δημιουργεί ένα φυσικό καφέ – μαύρο χρώμα στην επιφάνειά του, όταν οξειδώνεται για να προφυλάσσει το υπόλοιπο μέταλλο από την οξείδωση.

Εφαρμόζουμε τις παρακάτω επεξεργασίες :

- γυαλισμένος μπρούτζος
- βουρτσαριστό μπρούτζος
- μπρονζέ φινίρισμα

Μάρμαρο Βελγίου

Χρησιμοποιείται για περισσότερο από 300 χρόνια στην κατασκευή κτηρίων. Έχει άριστη αντοχή στον χρόνο και τις εξωτερικές συνθήκες. Αποτελεί αναντικατάστατο, εξαιρετικής ποιότητας ορυκτό υλικό, που με την κατάλληλη επεξεργασία μπορεί να πάρει τη φόρμα που επιθυμούμε.

Ξύλο iroko

Το ξύλο αυτού του τύπου είναι αφρικανικής παραγωγής, ευρέως διαδεδομένο ως πρώτη ύλη πλωτών μέσων και επίπλων εξωτερικού χώρου. Η ανθεκτικότητά του είναι μεγαλύτερη από 25 έτη (Wood class I). Η συντήρησή του γίνεται ετησίως με βερνίκι για έπιπλα εξωτερικού χώρου.

Unit of light measurement

Illuminance (lx)

Luminous flux (lm)

Luminous intensity (cd)

Verlichting

lux : (lx) de lux stemt dus overeen met de verlichtingssterkte die men heeft wanneer iedere vierkante meter van het beschouwde oppervlak een lichtstroom van één lumen ontvangt. Het aantal lux wordt bijgevolg gevonden als het quotiënt van de totaal ontvangen lichtstroom, uitgedrukt in lumen, en de grootte van het verlichte oppervlak uitgedrukt in vierkante meters; derhalve is 1 lux = 1 lumen/m².

L'éclairage

lux : (lx) compte la luminosité ,c'est-à-dire l'écoulement lumineux qui tombe sur une surface concrète.Cette mesure est influencée par la fréquence de la radiation et la distance de la source. Plus grande est la distance de la source lumineuse, plus petite sera la luminosité. L'unité lux représente les lumens par mètre carré de surface (lumen/m²) et est utilisée pour déterminer l'écoulement lumineux indispensable au point éclairé. La différence entre lux et lumen est que le lux prend en compte la surface sur laquelle tombe l'écoulement lumineux.

Illuminance

lux : (lx) the brightness, i.e. the luminous flow which falls on a concrete surface. This measure is influenced by the frequency of the radiation and the distance from the source. The greater the distance from the light source, the smaller the brightness. The lux unit represents brightness per square meter of surface (lumen/m²) and is used to determine the flow of light in critical points. The difference between lux and lumen is that lux takes into account the surface on which the light flow falls.

Beleuchtung

lux : (lx) misst die Leuchtkraft, d.h. den Lichteinfall auf eine bestimmte Fläche. Diese Messung wird von der Strahlenfrequenz und der Distanz zur Lichtquelle beeinflusst. Je weiter der Abstand zur Leuchtquelle, desto kleiner die Leuchtkraft. Die Einheit lux steht für Lumens pro m² Fläche (lumen/m²) und wird zur Bestimmung des notwendigen Lichteinfalls am beleuchteten Punkt genutzt. Der Unterschied zwischen Lux und Lumen ist der, dass Lux die Fläche auf die das Licht einfällt, mitberücksichtigt.

Φωτισμός

lux : lx (λούξ) Σε lux μετριέται η φωτεινότητα (illuminance), δηλαδή η φωτεινή ροή που προσπίπτει σε μία συγκεκριμένη επιφάνεια, μακριά από μία φωτεινή πηγή. Η τιμή αυτή επηρεάζεται από τη συχνότητα της ακτινοβολίας και την απόσταση από την πηγή. Όσο μεγαλύτερη είναι η απόσταση από τη φωτεινή πηγή, τόσο μικρότερη θα είναι η φωτεινότητα. Η μονάδα lux αντιπροσωπεύει τα lumens ανά τετραγωνικό μέτρο επιφάνειας (lumen/m²) και χρησιμοποιείται, για να προσδιορίσει την απαραίτητη φωτεινή ροή στο φωτιζόμενο σημείο. Η διαφορά ανάμεσα σε lux και σε lumen είναι ότι το lux λαμβάνει υπόψη την επιφάνεια, στην οποία προσπίπτει η φωτεινή ροή.

Lichtstroom

Alle uitgestraald vermogen uitgezonden door een lichtbron en waargenomen door het heet lichtstroom.

lumen : (lm) rekening houdend met de stroom van licht (flux), dat een lichtbron produceert.

Flux lumineux

Toute la puissance rayonnée émise par une source lumineuse et perçue par l'œil est appelé flux lumineux .

lumen : (lm) compte l'écoulement lumineux(flux), que produit une source lumineuse.

Luminous flux

All the radiated power emitted by a light source and perceived by the eye is called luminous flux.

lumen : (lm) is the luminous flow (flux), that a light source produces.

Lichtstrom

Die gesamte Strahlkraft die von einer Lichtquelle ausgeht, wird durch das Auge wahrgenommen und Lichtstrom genannt.

lumen : (lm) zählt den Lichtstrom den eine Leuchtquelle produziert.

Φωτεινή ροή

Όλες η εκπεμπόμενη ισχύς που εκπέμπεται από μια πηγή φωτός και αντιληπτή από το μάτι καλείται φωτεινή ροή.

lumen : lm (λούμεν) Η μονάδα μέτρησης της φωτεινής ροής (luminous flux), την οποία παράγει μια φωτεινή πηγή.

De lichtintensiteit

In het algemeen straald een lichtbron haar lichtstroom in verschillende richtingen en met verschillende sterktes. De intensiteit van de zichtbare straling in een bepaalde richting wordt lichtsterkte genoemd.

candela :(cd) Dit is de intensiteit van de lichtbron, die aan een meter van de lichtbron een helderheid van 1 lumen/m² (dat wil zeggen 1 lux).

Intensité lumineuse

D'une manière générale, une source de lumière émet son flux lumineux dans des directions différentes et à des intensités différentes. L'intensité de rayonnement visible dans une direction particulière est appelé intensité lumineuse.

candela :(cd) Il s'agit de l'intensité de la source lumineuse, qui à distance d'un metre de la source a une luminosité de 1 lumen/m² (c'est-à-dire 1 lux).

Luminous intensity

Generally speaking, a light source emits its luminous flux in different directions and at different intensities. The visible radiant intensity in a particular direction is called luminous intensity.

candela :(cd) Hier handelt es sich um die Intensität der Lichtquelle, welche bei einem Abstand von 1m von der Lichtquelle eine Leuchtkraft von 1 Lumen/m² beträgt (also 1 lux).

Lichtintensität

Im allgemeinen strahlt eine Lichtquelle ihren Lichtstrom in verschiedene Richtungen und in unterschiedlicher Intensität aus. Die Intensität der sehbaren Leuchtkraft in eine bestimmte Richtung wird Lichtintensität genannt.

candela :(cd) die Intensität der Lichtquelle, eine Entfernung von einem Meter von der Quelle eine Helligkeit von 1 Lumen/m² (dh 1 Lux) in Bezug auf die Farbzuordnung des Lichts.

Η ένταση του φωτός

Σε γενικές γραμμές, μια πηγή φωτός εκπέμπει φωτεινή ροή της προς διαφορετικές κατευθύνσεις και σε οιαφορετικές εντασεις. Ιο ορατό ένταση ακτινοβολίας σε μια συγκεκριμένη κατεύθυνση ονομάζεται φωτεινή ένταση.

candela:cd (καντέλα) Πρόκειται για την ένταση της φωτεινής πηγής, που σε απόσταση ενός μέτρου από την πηγή έχει φωτεινότητα ενός lumen/m² (δηλ. ενός lux).

Chromacity Diagram

Color temperature

Luminance
Kleurtemperatuur

De kleurtemperatuur van een lichtbron wordt gedefinieerd ten opzichte van een "zwarte straal" en weergegeven op de "Planck curve", zoals weergegeven op het diagram. Hoe meer de kleurtemperatuur van deze "zwarte straal" hoog is, hoe hoger het blauw spectrum is en hoe minder rood aanwezig is.

La température de couleur

La température de couleur d'une source lumineuse est définie par rapport à un «corps radiateur noir» et reportées sur ce qui est connu sous le nom de la «courbe de Planck», comme le montre le diagramme. Plus la température de ce «corps radiateur noir» est élevée, plus grande est la composante bleue du spectre et plus petite la composante rouge.

Color temperature

The color temperature of a light source is defined in relation to a «black body radiator» and plotted on what is known as the «Planckian curve» as shown in the diagram. The higher the temperature of this «black body radiator», the greater the blue component of the spectrum and the smaller the red component.

Farbtemperatur

Die Farbtemperatur einer Lichtquelle wird anhand eines „schwarzen Strahlkörpers“ definiert und auf die „Plancksche Kurve“ übertragen, wie in dem Diagramm dargestellt. Je höher die Temperatur des „schwarzen Strahlkörpers“, desto höher ist der Blauanteil des Spektrums und desto kleiner ist der Rotanteil.

Θερμοκρασία χρώματος

Η θερμοκρασία χρώματος της φωτεινής πηγής ορίζεται σε σχέση με ένα «μαύρο σώμα καλοριφέρ» και αποτυπώνονται σε αυτό που είναι γνωστό ως η «καμπύλη ακτινοβολητή Planck», όπως φαίνεται στο διάγραμμα. Όσο υψηλότερη είναι η θερμοκρασία αυτής της «μαύρης καλοριφέρ σώμα» είναι υψηλή, τόσο μεγαλύτερη είναι η μπλε συνιστώσα του φάσματος και η μικρότερη είναι η κόκκινη συνιστώσα.

Indicative:

Warm wit, blanc chaud , warm white , warmweiß, Θερμό λευκό	< 3300 K°
Koel wit, blanc neutre, neutral white, neutralweiß ,Ψυχρό Λευκό	> 3300 K°
Daglicht, blanc de jour, daylight, Tageslicht, Λευκό ημέρας	> 5000 K°

Luminantie

Met de lichtsterkte, dat wil zeggen de stroom van licht dat valt op een welbepaald oppervlak. Deze maatregel wordt beïnvloed door de frequentie van de straling en de afstand tot de bron. Hoe groter de afstand tot de lichtbron, hoe kleiner de helderheid. De eenheid lux vertegenwoordigt het aantal lumen per vierkante meter (lumen/m²) en wordt gebruikt om de lichtstroom te bepalen vereist voor het te belichten punt. Het verschil tussen lux en lumen is dat lux rekening houdt met het te belichten oppervlak.

La luminance

La luminance d'une source de lumière ou une zone éclairée est une mesure de combien l'œil est stimulé et donc de la façon dont une grande impression de luminosité est créé dans le cerveau. Elle est mesurée en candelas par mètre carré.

Luminance

The luminance of a light source or an illuminated area is a measure of how much the eye is stimulated and therefore of how great an impression of brightness is created in the brain. It is measured in candelas per square meter.

Die Leuchtdichte

Die Leuchtdichte einer Lichtquelle oder einer beleuchteten Fläche ist ein Maßstab für die Augenstimulation und somit dafür, wie eine starke Wahrnehmung der Helligkeit im Gehirn entsteht. Sie wird in Candela pro m² gemessen.

Φωτεινότητας

Η φωτεινότητα της φωτεινής πηγής ή μια φωτεινή επιφάνεια είναι ένα μέτρο του πόσο πολύ το μάτι διεγείρεται και επομένως το πόσο μεγάλη είναι η εντύπωση της φωτεινότητας δημιουργείται στον εγκέφαλο. Μετριέται σε candela ανά τετραγωνικό μέτρο.

L'efficacité lumineuse

Lichtopbrengst geeft aan dat de efficiëntie waarmee de elektrische stroom wordt omgezet in licht. Dit wordt gemeten in lumen per Watt (lm / W).

L'efficacité lumineuse

L'efficacité lumineuse indique l'efficacité avec laquelle la puissance électrique consommée est convertie en lumière. Elle est mesurée en lumens par watt (lm / W).

Luminous efficacy

Luminous efficacy indicates the efficiency with which the electrical power consumed is converted into light. It is measured in lumens per watt (lm/W).

Leuchtkraft

Die Leuchtkraft gibt die Wirkungskraft an, mit der die verbrauchte Stromleistung in Licht umwandelt wird. Sie wird in Lumens pro Watt (lm/W) gemessen.

Φωτεινή απόδοση

Φωτεινή απόδοση δείχνει την αποτελεσματικότητα με την οποία η ηλεκτρική ενέργεια που καταναλώνεται μετατρέπεται σε φως. Μετριέται σε lumens ανά watt (lm / W).
